GENERAL DESCRIPTION

This series of 1 watt regulated DC/DC converters provides an economical and space efficient solution in applications where systems voltage conversion, regulation and isolation are required at point of load. Wherever 5 or 12 VDC power is available, these converters enable the designer to have other positive and negative regulated voltages in a form factor compatible with IC assembly techniques. The converters are encapsulated and operate without derating or heatsinking over their full specified temperature range. Solid tantalum capacitors are used for enhanced reliability. The units are specifically designed for applications where low ripple and noise are required, as in circuits using OP-AMPS, A/D, D/A and F/V converters, RAMS, EPROMS and microprocessors. They can also be used for negative voltage bias applications.

OUTPUT CONFIGURATION OPTIONS

Standard isolated outputs: 5, 12, 15, ± 5 , ± 12 , ± 15 VDC

Combined isolated outputs: 10, 24, 30VDC

Combined non-isolated outputs: -3, -7, -12, -15, -24, -30, +17, +20, +29, +35, +36, +42VDC

- Achieving these voltages is dependent on model type selected and configuration used. Please contact factory for assistance in selection.
- Total load is 1 watt. This load may be split unequally between the two outputs. Maximum load for 5VDC outputs is 0.5 watt.

TEST CIRCUIT SCHEMATIC

- When measuring output noise use most direct possible connections to ensure correct readings.
- All noise measurements between 20HZ to 20MHZ BW.
- R(LOAD) Selected for maximum rated output current.

Caution: (1) Do not insert or remove device with power applied. (2) Care must be taken to observe input polarity.

TYPICAL APPLICATION
